

Powder applicators

Save powder with a flick of your hand!

Save time and money!

Powder saving

An integrated 100 kV cascade multiplier ensures maximum charging capacity. This means that more paint reaches detail, less to the paint recovery system! Digital valve control technology ensures accurate metering and a reproducible amount of powder. This allows you to get more uniform coating.

Powder gun ProfiGun PM-1D

- Light ergonomic gun, perfectly balanced with a profiled handle
- Ceramic cascade with a voltage of up to 100,000V effectively loads all types of powders
- The new generation of nozzles ensures perfect penetration of the powder into complex shapes
- The profiled nut allows a good grip
- Conductive handle with high carbon content provides excellent grounding for the painter
- The gun is made of special materials with increased impact resistance
- Fully detachable construction with replaceable powder path tube
- The gun is a patent in the USA and EU
- Cascade polarization - negative

Powder coating injector Profijector

- Construction of a new efficient injector
- The most effective feeding angle demonstrated by tests
- It saves paint and air compared to right angle injectors
- It has relatively low operating costs compared to other pumps
- The injector is the subject of a European patent
