

Transport systems

Depending on the requirements of the customer transport systems can move across the floor, or be hung on poles.

- Comfort solution for manual installation, we recommend suspended cross beams (cross transport).
- Automated systems are most commonly uses chain conveyors that not stop and are a great solution for companies that rely on the quality and repeatability of the process.
- Automated systems for companies that do different items at one time and have eg. A few booths with different colors, we recommend flexible solution conveyor power-and-free. This is the most expensive alternative.
